Good to hear, Toni.

When will those updates be posted?

Hi Mark,

Thanks for the reference. This is already part of the new site and will be reflected in the latest updates.

Thanks,

Toni Krasnic

Toni,

I am attaching the page from the old Website that discusses the rationale for the long-chain category. In particular, it includes an explanation of why substances like PFHxA were not included (i.e., shorter half lives, lesser toxicity). This is particularly helpful when the industry has explained the differences between PFHxS and PFHxA. Many advocacy groups choose to ignore the clear differences in hazard between the two substances.

So it is important to retain this text describing how EPA established the long-chain vs. short-chain categories. In terms of placement on the Website, there are of course several options. We simply want the statement to be placed in a logical and accessible part of the Website's content on PFAS.

Hi Mark,

We're still working on the website updates.

Can you send me the sections of the old website that were of particular interest to include in the new website?

Thanks,

Toni Krasnic

Hi Mark,

Hope you had a nice Holiday.

I'm responding to the 2 questions you left me in the voicemail.

3M MOU

3M MOU can be accessed at
<http://www.regulations.gov/fdmspublic/component/main?main=DocketDetail&d=EPA-HQ-OPPT-2004-0112>. I tried to access it this morning but the site is down. 3M's final report should be in that docket as one of the last documents (you can search by date). Let me know if you can't find it once the site is working again.

PFOA Website

I checked with the web person and was told that only the basic pages got uploaded at this time. She's still working on uploading the remaining pages for the PFOA site and other OPPT sites. The remaining pages should be uploaded soon, hopefully in the next two weeks.

Thanks,

Toni Krasnic
